BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

ALIGNMENTS

```
The haemonojetin receptor (HR) NR6.11 is a form of the novel HR NR6. Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening. Sequence 1629 BP; 336 A; 541 C; 453 G; 299 T;
                                                                                                                                                                            P-PSDB; W55011.

New isolated haemopoletin receptor - used for developing products for modulating proliferation, differentiation and survival of cells, e.g. neuronal cells

Claim 4; Page 77-81; 182pp; English.

Claim 4; Page 77-81; 182pp; NR6.1 is a form of the novel HR NR6.

                                                                                                                       PT New isolated haemopoletin receptor - used for developing products
PT for modulating proliferation, differentiation and survival of cells,
PT e.g. neuronal cells
PT e.g. neuronal cells
PT claim 5; Page 84-87; 182pp; English.
CC Interaction between the novel HR and a ligand facilitates proliferation,
CC Interaction between the novel HR and a ligand facilitates proliferation,
CC derivatives can be used for modulating the activity of the receptors e.g.
CC derivatives can be used for modulating the activity of the receptors e.g.
CC to regulate development, maintenance or regeneration in an array of
CC different cells and tissues in vitro and in vivo. They can be present in
CC therapeutics used for modulating neuronal proliferation, differentiation
CC and survival. The products can also be used for detection and diagnosis,
CC e.g. for cancers or predisposition to cancers, or for drug screening.

PT New nucleic acid encoding U4 haematopoletin receptor superfamily PT chain - potentially useful, e.g. for modulating cell proliferation PT or immune response, for treating cancer and auto: immune disease PS Claim 1; Pages 25-26; 38pp; English.

CC This is the nucleotide sequence encoding the murine U4 protein from CC the haematopoletin receptor superfamily, used in the method of the CC invention for the modulation of cell proliferation, or the immune CC response. Transformed mammalian cells are used to produce recombinant CC U4 protein. The U4 protein is used to screen for specific binding CC agents, raise antibodies. It is also used as reagents for assays and CC at issue markers for isolation of cognate ligands and receptors, and CC in pharmaceutical compositions which may modulate cell proliferation, cell differentiation, and the immune system (e.g. for treating immune CC deficiency, inherited or the result of infection, autoimmune diseases, Sequence 1656 BP; 318 A; 552 C; 478 G; 308 T;
